Shark

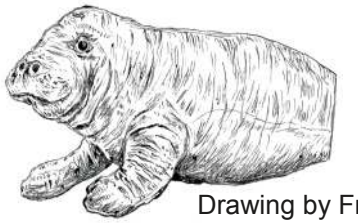

Grid by Shark

100 years and a day on from his death, solvers must re-enact what 10aw (unclued) managed to achieve. This is completed by relocating certain thematically positioned letters in blue into the unused white cells, and then adding his forename alongside. The remaining letters in blue spell out what has been achieved.

By ensuring that all white cells are filled with a single letter, you will produce 10 new six-letter words or names reading up or down the perimeter of the grid. Clues are numbered in alphabetical order of their solutions.
